## VALIDATION VERIFICATION AND TEST OF KNOWLEDGE BASED SYSTEMS

### **validation verification and test pdf**

Verification and validation are independent procedures that are used together for checking that a product, service, or system meets requirements and specifications and that it fulfills its intended purpose. These are critical components of a quality management system such as ISO 9000. The words "verification" and "validation" are sometimes preceded with "independent", indicating that the ...

### **Verification and validation - Wikipedia**

VERIFICATION vs VALIDATION are hugely confused and debated terms in the software testing world. You will encounter (or have encountered) all kinds of usage and interpretations of these terms, and it is our humble attempt here to distinguish between them as clearly as possible.

Holdout dataset. Most simply, part of the original dataset can be set aside and used as a test set: this is known as the holdout method.. Cross-validation. A dataset can be repeatedly split into a training dataset and a validation dataset: this is known as cross-validation. These repeated partitions can be done in various ways, such as dividing into 2 equal datasets and using them as training ...
